SUPPLEMENT TO  
REPORT NO.

50X1-HUM

THIS DOCUMENT CONTAINS INFORMATION AFFECTING THE NATIONAL DEFENSE OF THE UNITED STATES WITHIN THE MEANINGS OF THE ESPIONAGE ACT 50 U.S.C. 31 AND 32 AS AMENDED. ITS TRANSMISSION OR THE REVELATION OF ITS CONTENTS IN ANY MANNER TO AN UNAUTHORIZED PERSON IS PROHIBITED BY LAW. REPRODUCTION OF THIS FORM IS PROHIBITED.

THIS IS UNEVALUATED INFORMATION

1. The Celakovice factory, which now forms part of the Tovarny Obrabecnych Stroj (Machine Tools Combine), is located on the outskirts of Celakovice (051/L99) on the road to Brandys. It was formerly known as Wollmann & Co., but has now been nationalized.
2. The plant is powered by electricity from the Kolin power station. It has its own boilers for heating and driving steam hammers. The factory is equipped with the following modern machinery which is in excellent condition:
- 690 lathes of various sizes
  - 146 revolving lathes
  - 90 universal "Automaten"
  - 230 planing machines (horizontal and vertical)
  - 35 horizontal drilling machines
  - 412 vertical drilling machines
  - 120 polishing machines
  - 54 screw threading machines
  - 120 metal shaping machines
  - 16 presses
  - 48 hand-operated adjustable polishing machines
  - 3 metal cutting machines
  - 11 steam hammers
  - 7 machine saws.
3. The factory produces lathes of all types, from the small watchmakers' lathes to lathes 12 m. long, special planing machines for cog wheels, revolving lathes, drills, shaping machines and spare parts for foreign machine tools in use in Czechoslovakia. Finished products are exported principally to the USSR, Poland, Hungary.
4. Steel is obtained from Poldi Kladno and Trinec, iron ingots from the USSR electric motors from CKD in Prague, Vysocany, and from MEZ in Moravia, ball bearings from Zbrojovka Lisen, and transmission belts from the Matador Works in Bratislava.
5. The factory employs 3,240 workmen and 350 officials. Except for the iron foundry which operates in three shifts, work can be carried on in only one shift because of shortages of ball bearings, high grade steels, non-ferrous alloys and cast iron. The most vulnerable point in the works is transformers.
